Year: 2020-21

A zero count should be used when there were no children to report in the specific category for the given reporting period. Comment: Arizona saw a sudden, sharp decline in the number of referrals made to Part C when the Governor issued Stay at Home orders beginning in March 2020 as primary referral sources such as home visitors and physician's offices temporarily stopped seeing families for routine well-child screenings. Lead Agency staff, service providing agency leaders and providers worked closely with stakeholders and potential referral sources for public awareness around the fact that the Lead Agency was continuing to accept referrals and provide services through alternative service delivery methods during the extended period of the SARS-CoV-2 (COVID-19) Pandemic. Referrals to Part C were very close to the typical yearly ebbs and flows but at a lower rate than historical trends. Fewer referrals received resulted in proportionally fewer children eligible for Part C and receiving services. The Lead Agency continues to engage potential referral sources and stakeholders, statewide, to provide general information and target specific communities and demographics where Child Find is disproportionately lower than expected in order to impact the number of children found eligible and, ultimately, receive services under Part C.
