

Importance of Early Intervention

If you have concerns about your child's development, don't wait to get help. Act now!

Why?

A baby's brain is most formative in the first three years of life.

Intervention is more effective when provided earlier rather than later!

Skill delays affect a child's success in school, behavior, health and adulthood.

Each skill learned is a stepping stone; it helps to build additional skills.

Early intervention helps families better meet the needs of their child. The Arizona Early Intervention Program (AzEIP) can help eligible families develop individualized plans to support their child's development when they need it most.
