

SCABIES

SCABIES is an infection in the skin by mites (parasites) which affects humans. The mites burrow under the skin and create intense itching and a rash-like appearance of the skin. Some individuals are at risk for crusted scabies, a severe form of scabies creating thick crusts of skin containing very large numbers of mites and eggs.

SOME FACTS about SCABIES

- Itching and skin rash may not appear until four (4) to six (6) weeks after infection.
- Prolonged skin-to-skin contact passes the infection from person to person.
- Scabies mites can survive on linens and other surfaces for up to three (3) days.
- Crusted Scabies is a severe, highly contagious form of scabies.

RISK FACTORS (Causes)

The following increase chances of getting Scabies:

- Direct skin-to-skin contact with an individual who has scabies.
- Living conditions where close quarters are common, such as nursing homes, group homes, extended care facilities, and daycare centers.
- Sharing the clothing, towels, or bedding of an infected individual.
- Individuals with a weak immune system (aging, disability, illness) are at risk for severe CRUSTED SCABIES.

WHAT to WATCH FOR

The following physical signs may be helpful in recognizing an individual with scabies:

- ITCHING (especially at night)
- SKIN RASH (“pimple-like” or tiny blisters)
- CRUSTED PATCHES OF SKIN (for individuals with crusted scabies)
- COMMON LOCATIONS for rash may include:
 - wrist
 - elbow
 - armpits
 - buttocks
 - groin area
 - between the fingers or toes
 - shoulder blades
 - palms of hands
 - under breasts
 - possibly the entire body

WHAT TO DO

- **IMMEDIATELY CONTACT THE DOCTOR** for noted signs and symptoms of scabies.
 - If confirmed as scabies, the doctor will order medication to get rid of the scabies.
 - Additionally, the doctor may treat other household members and staff in close contact with the individual confirmed to have scabies.
- **PRACTICE GOOD HAND HYGIENE: Wash hands between individuals with whom you are working and use alcohol-based hand rubs and sanitizers.**
- Scabies is generally passed through direct, prolonged, skin-to-skin contact or through use of another individual’s personal items.
 - Do not share personal items such as towels, clothing, or bedding.
- **CLEANING:**
 - Wash clothing, bedding, and towels in washer with detergent and dry in dryer.
 - Fabric should be washed and dried on warmest setting stated on the cleaning instructions label.
 - Scabies mites can live up to three (3) days when not in contact with an individual’s body.
 - Clean room(s) and furniture of the infected individual(s) and other members of the household.

EMERGENCY

Contact the doctor if symptoms, such as rash and itching, do not get better within the time specified by the doctor, or if other concerns arise.

State of Arizona • Equal Opportunity Employer/Program

Under Titles VI and VII of the Civil Rights Act of 1964 (Title VI & VII), and the Americans with Disabilities Act of 1990 (ADA), Section 504 of the Rehabilitation Act of 1973, the Age Discrimination Act of 1975, and Title II of the Genetic Information Nondiscrimination Act (GINA) of 2008; the Department prohibits discrimination in admissions, programs, services, activities, or employment based on race, color, religion, sex, national origin, age, disability, genetics and retaliation. The Department must make a reasonable accommodation to allow a person with a disability to take part in a program, service or activity. For example, this means if necessary, the Department must provide sign language interpreters for people who are deaf, a wheelchair accessible location, or enlarged print materials. It also means that the Department will take any other reasonable action that allows you to take part in and understand a program or activity, including making reasonable changes to an activity. If you believe that you will not be able to understand or take part in a program or activity because of your disability, please let us know of your disability needs in advance if at all possible.
